Introducing SIMREX DataMover D-Gate

The DataMover D-Gate is the ideal solution for preserving your investment in legacy serial devices, while facilitating migration to, or expansion of, an IP enterprise network for data collection.

The DataMover D-Gate solution provides integration of DataMover Network Wide Diagnostics into the enterprise network via the D-Gate diagnostic proxy server. This allows integration of your legacy radio products into the same SNMP network management system (DataMover D-View or other) as the rest of your network. In addition, the DataMover D-Gate adds webserver and Telnet interfaces for diagnostics and control of your DataMover serial radio network.

The DataMover D-Gate serves as an Internet Protocol (IP) terminal server gateway between an DataMover radio network and the enterprise network, bringing serial payload data onto the network. The standard DataMover D-Gate supports two user ports and is expandable up to 10 using any off-the-shelf USB to Serial expansion device.

Why use an SIMREX DataMover D-Gate Network Access Solution?

DataMover Wireless Network Integration enables migration of existing serial devices to IP networks to provide lowest cost of ownership.

SNMP Proxy for SIMREX DataMover Radio Diagnostics Software

SIMREX D-View Network Management System is based on a platform independent Java application. It is application independent with a centralized SNMP server and integrates with multiple vendor platforms.
